

Randox Food Diagnostics

RX Monaco: Fully Automated Solutions for High Quality Wine Testing

Location: Kearneysville, WV

Web: www.randoxfooddiagnostics.com

WIN Profile: Randox Food Diagnostics

The epic harvest of 2012 requires top-notch analysis to develop high quality, vintage wines – and Randox Food Diagnostics has perfected a state of the art, fully automated and cost-effective wine testing system ideally suited to the task.

Developed for medium to large-sized wineries, the RX Monaco system can perform up to 170 analyses per hour with results beginning in less than 13 minutes. The Monaco test menu includes: acetic acid, copper, ammonia, ethanol, glucose/fructose, iron, lactic acid, malic acid, potassium, total antioxidant status (TAS) and total SO₂. Available this June will be Citric Acid and NOPA.

Featuring easy-to-use Windows-based software, Monaco's ground-breaking, remote access diagnostics allow for immediate support to existing systems, reducing downtime and the expense associated with timely call outs. Technical support is available 24/7 to any location around the globe.

The Monaco system features 120 reusable optical plastic cuvettes, which are automatically washed through 12-step cleaning program to minimize contamination and reduce consumable costs. In addition, cooled reagent and sample carousels ensure that reagent controls and calibrators can be stored on board the analyzer for ease of inventory management without compromising stability.

RANDOX

FOOD DIAGNOSTICS

The RX Monaco is an efficient, cost-effective upgrade to a fully automated analyzer that can be easily integrated into any winery setting, with options for both floor standing and bench top units to maximize space.

With more than 30 years in the food & beverage diagnostics industry, Randox research and development specialists produced the innovative RX Monaco as the ultimate solution for wineries in terms of cost containment, convenience and performance.
