

LYSIS ELEVAGE

Microgranular enzymatic preparation used to accompany ageing great wines

CHARACTERISTIQUES

LYSIS ELEVAGE is a microgranular enzymatic preparation, rich in pectinase, cellulase and β glucanases derived from *Aspergillus niger* used for releasing glucanes from the yeast cell walls during the ageing on lees process.

LYSIS ELEVAGE is naturally poor in cinnamoyl esterase and thus prevents the formation of volatile phenols.

OENOLOGICAL PROPERTIES

- Release of glucanes from yeast cell walls
- Polysaccharide and mannoprotein enrichment while providing roundness and volume
- Acceleration of yeast autolysis
- Decrease ageing time
- Improve filterability

APPLICATIONS

- On all types of wine requiring ageing on lees

APPLICATION RATE

Recommended dose: 2 to 4 g/hL of wine depending on vine variety, duration and temperature.

Maximum legal dose in accordance with regulations in force: none

INSTRUCTIONS FOR USE

Dilute **LYSIS ELEVAGE** in 10L of water or must.

Incorporate into volume to be treated. Homogenize well.

Caution:

Product for exclusively oenological and professional use.

Use in compliance with regulations in force.

INGREDIENTS

Pectinases, cellulase, β glucanase, maltodextrine. Contains no GMOs.

Enzymatic activities:

Pectinases (EC 3.2.1.15) > 40 000 AJDU/g

Cellulases (EC 3.2.1.89) + β glucanase (EC 3.2.1.58) > 90 000 mSU/g

PACKAGING

100g box

STORAGE

Full packaging, seal of origin, store away from light in a dry and scent-free place.

Upon reception, keep at a temperature under 25°C. To keep after the harvest, store at a temperature under 8°C.

Once open: keep at a temperature under 8°C and use quickly.

Best used before BIUB date written on package
